Payanar Type Script

OUR PHILOSOPHY

"Software is a fundamental need for every business. It is not a privilege."

The Business Knowledge Platform

A new kind of ERP: your business knowledge, written in a language AI understands

A living knowledge base, not hand-written code and rigid tables, drives every screen and business rule.

Powered by Payanarss Type Script (PTS): the language and knowledge base behind every data model, rule and screen

Abu Dhabi, UAE

VISION

Digital Empowerment Is a Right, Not a Privilege

"Digital empowerment is no longer a privilege—it is a fundamental need for every citizen. CRUD is the new pen and paper."

Just as reading and writing are essential skills, so is the ability to use digital tools. Every citizen should be able to create, manage and use digital applications without technical barriers or dependency on costly developers. **CRUD is the new literacy.** Payanar exists to democratize software creation by removing cost, complexity and dependency.

THE PROBLEM
Current ERP Systems Are Failing

Data Migration Between ERPs

Moving from one ERP to another means re-mapping data from one rigid data model to another — the main reason switching is so costly and risky.

Vendor Lock-In

Organizations rely on one vendor — costly to switch or integrate alternatives.

Hard to Customize

Even minor changes require deep core modifications or waiting for next release.

Integration Challenges

Monolithic ERPs were not built for openness — third-party integration is fragile.

Monolithic Architecture

Giant tightly-coupled modules that are interdependent and fragile.

High Cost of Change

Making updates to a deployed ERP is expensive, slow, and risky.

Supporting Evidence

50M SMBs globally have NO ERP

70% cite "Too expensive"

65% cite "Too complex"

80% implementation failures (Gartner)

Average ERP project: 18 months, $2.5M

Only 15% SMBs use enterprise software

$500B+ market underserved

"ERP should be as flexible as the business it serves — today it isn't."

OUR SOLUTION: PTS-Driven, Modular AI Agent ERP

One AI-understandable language — PTS — defines data models, business logic and UI behaviour

WHAT IS PTS

PTS is a new, open-source language for the IT industry.

Open for anyone to read, use and extend, so no single vendor owns your business logic. Payanarss Type Script describes the business itself, its data models, rules and screens, in one language AI can read, stored as a knowledge base and run by our own interpreter. The right logic is downloaded to each user's system from their business configuration and lookup selections.

THE COMPETITION

Four leaders, four vendor-specific languages.

Microsoft, SAP, Oracle and Zoho each build ERP on vendor-specific languages and tools: X++, ABAP, SuiteScript and Deluge. Each keeps business logic in the vendor's own tooling.

Granular, Layered Agents

Functionality is split at a very fine grain (e.g. "Employee Record," "Onboarding," "Training"), each with UI, Business and Data layers and its own data store. No giant unified schema.

PTS: AI-Understandable Language

A scripting language AI can understand. All data models and business logic are defined in PTS, so the ERP is described in a form AI can read, not hand-coded per customer.

PTS Interpreter

We built the interpreter for PTS. It runs PTS directly, so adding or changing a data model or business rule is a PTS change, not a rebuild of the core.

PTS as AI Knowledge Base

PTS is stored in a Vector DB / Graph DB as the knowledge base AI works from, so the right definitions can be found by meaning and by how types, lookups and rules relate.

Configuration-Driven UI & Logic

PTS is selected from business configuration and lookup types. UI rendering and business logic both work from the output of the Vector / Graph DB.

Security & Governance

Each agent enforces authentication, authorisation, and data privacy. Only authorised orchestrators can invoke sensitive agents.

HOW PAYANAR DIFFERS FROM THE INCUMBENTS

Incumbent platforms run on vendor-specific code and tools; Payanar runs on a knowledge base AI can read

Microsoft Dynamics 365 (incl. CRM)

Established suite. Logic and data models live in Microsoft's own platform and tools (Dataverse, X++, Power Platform), so changes need those skills.

Payanar: Knowledge, Not Code

Data models, rules and screens are PTS, stored as a knowledge base AI can search and reason over, not buried in code and rigid tables.

Oracle NetSuite

Cloud ERP for the mid-market. Customisation is done in NetSuite's own scripting and workflow tools (SuiteScript, SuiteFlow), tied to its platform.

Configure, Don't Customise

Behaviour is selected from business configuration and lookup types selection (Runtime), so a change is a PTS change, not a rebuild of the core.

SAP Business One

ERP for small and mid-size firms. Customisation goes through SAP's own SDK, user-defined fields and add-ons, tied to SAP's platform.

Built for the Rest of the Market

All use cases on mobile for individuals and micro businesses, with pricing that starts near zero, alongside desktop for companies.

OUR SOLUTION: Architecture — Communication & Orchestration

Prompt-based inter-agent communication, dynamic workflows, open APIs

Prompt-Based Communication

Agents communicate via high-level natural language prompts. An AI layer interprets and routes messages — eliminating proprietary API dependencies.

Well-Defined Open APIs

Every agent exposes RESTful APIs documented with OpenAPI/Swagger. Integration is transparent, standardised, and not proprietary.

Dynamic Workflow Orchestration

Business rules are authored in PTS, not embedded procedural code. The AI layer retrieves the right PTS from the Vector / Graph DB and orchestrates it at run time.

Comprehensive Logging

Robust logging and monitoring from the start. Distributed agent system issues can be pinpointed despite many services being involved.

Extensibility via Agent Marketplace

No vendor lock-in — organisations can source agents from multiple vendors or open-source communities and integrate seamlessly.

Cross-Company B2B Integration

Processes span across suppliers, customers, and regulators. Company A's ERP issues a PO that Company B's ERP receives as a sales order via agent prompts.

OUR SOLUTION: Every Use Case, on Every Device

All business use cases for end users — mobile for everyone, laptop / desktop for companies

Full Use-Case Coverage

Payanar covers all business use cases for end users, from micro businesses to companies — not a cut-down companion app.

Complete Mobile App

Every business use case is available in the mobile app, so nothing a user needs is limited to desktop.

Companies: Laptop & Desktop

Companies access Payanar from the laptops and desktops they already use.

Independent Users: Own Mobile

Independent users access Payanar on their own mobile phones — no company hardware or desktop needed.

Talk to the ERP, Anywhere

Viki lets users talk to the ERP on mobile — record a sale or send an invoice without navigating menus.

UI Driven by PTS

UI rendering works from PTS selected by business configuration and lookup types, so each business gets the screens it needs.

WHY IT MATTERS & WHY NOW

Shifting from a proprietary Black Box to a Composable, Vendor-Agnostic, User-Centric Service Platform.

Current Problem	Our Solution: Agent-Based ERP
Vendor Lock-In (high costs, single source)	No Vendor Lock-In ✓ — Any vendor can build/service/extend using independent Agents in any language.
Slow, Disruptive Upgrades (downtime)	Rapid Innovation ⚡ — Add new agent between two existing functions without downtime.
Rigid, Closed Architecture	Composable Ecosystem 🏪 — Agent Store (like NPM/NuGet) for ERP components.
Complex User Interfaces (transaction codes)	Human-Like Interaction 🗣 — Users talk to the ERP; no need to navigate cumbersome menus.
Isolated Business Systems	Cross-Company Integration 🌐 — Secure Prompt-to-Prompt communication across organisations.

WHY NOW: three enabling technologies are maturing at the exact moment the current ERP model is failing.

Generative AI & Autonomous Agents

Enables: Human-like ERP interaction and rapid innovation via agents.

Why now: LLMs and agent frameworks let business logic be invoked by simple prompts, replacing menu navigation and hardcoded APIs.

Composable / Microservices Architecture

Enables: No vendor lock-in and a composable ecosystem.

Why now: Cloud-native, API-first design lets ERP be split into small agents that any vendor can build and update without downtime.

Secure, Prompt-Driven Interoperability

Enables: Cross-company integration.

Why now: Standard prompt-to-prompt communication between agents makes B2B integration seamless, replacing brittle point-to-point links.

WHO IS YOUR CUSTOMER?

Micro businesses and SMBs in UAE real estate and manufacturing.

WHO THEY ARE

Businesses that need software but were priced out of it.

Owner-run micro businesses and SMBs in the UAE that manage orders, stock, tenants, contracts and accounts on spreadsheets and separate apps, because traditional ERP is too costly and too complex for them.

WHY PAYANAR FITS

Free software. Pay only for storage.

Payanar costs nothing to start. A business begins with one department and adds modules at no licence cost, paying only for the storage it chooses.

BY SIZE

Micro businesses 1–9 employees

Solo traders, small shops and home-based businesses that run on WhatsApp, Excel and paper. They need simple mobile software with no software cost to start.

Small and medium businesses 10–250 employees

Multi-staff firms that have outgrown spreadsheets but find large ERP too complex and costly, with per-user and per-module fees that grow as they do.

BY SECTOR

Real estate First UAE market

Developers, property managers and agencies tracking units, tenants, leases, payments and maintenance across many properties and contracts.

Manufacturing First UAE market

Factories and workshops managing production, inventory, quality, purchasing and finance. Our founders bring deep manufacturing experience.

MARKET SIZE

A $21–85B global opportunity, and we start where it is closest: the UAE.

50M	$21-85B	18-22%	<5%
SMBs globally have no ERP	Total Addressable Market	MENA market CAGR	Current MENA ERP penetration

WHERE WE START: THE UAE

A market built on SMEs

557,000

SMEs across all emirates (2022): 94.4% of all UAE companies and 63.5% of non-oil GDP.

Our addressable market

170K–220K

Tier-2 and Tier-3 SMEs that lack enterprise-grade ERP.

A market ready to move

15%+

annual SMB growth, backed by UAE Vision 2031 and the National AI Strategy.

Our five-year plan needs only about 1% of UAE Tier-2/3 SMEs: ~1,825 clients, AED 10.95M a year at AED 500 a month.

Go-to-Market

Free to Use. Pay Only for Data Storage.

Software is not a privilege. So we give it away, and grow when our customers do.

ZERO BARRIER TO START
Free download. No licence, no per-user and no per-module fees.

PROOF BEFORE PAYMENT
We run your own workflow first, one department at a time.

REVENUE THAT GROWS WITH YOU
Every module you add stores more data. You pay only for the storage you choose.

FREE APPLICATION | PAID STORAGE

1 Download Free → 2 Use the Application → 3 Choose a Storage Plan → 4 Pay for Storage

THE APPLICATION	STORAGE PLAN	STORAGE PLAN
FREE	**50 GB**	**100 GB**

Simple, transparent pricing · Choose the storage capacity you need · Pick the right plan as your data grows

REVENUE METRICS — 5-YEAR PROJECTION

UAE only: one new client a day at AED 1,000 a month builds AED 54.75M of recurring revenue in five years.

Year	New clients	Clients at year-end	Revenue (AED)	Cumulative (AED)
Year 1	365	365	2,190,000	2,190,000
Year 2	365	730	6,570,000	8,760,000
Year 3	365	1,095	10,950,000	19,710,000
Year 4	365	1,460	15,330,000	35,040,000
Year 5	365	1,825	19,710,000	54,750,000
Total (5 years)	**1,825**	**1,825**	**54,750,000**	**—**

AED 19.7M
Year-5 annual revenue

AED 54.75M
5-year cumulative revenue

73%
Revenue CAGR, Year 1 to Year 5

1,825
Paying clients by Year 5

One new client a day compounds into a recurring base: Year 5 earns 9× Year 1, because every client we win keeps paying.

Assumes 365 new clients a year, AED 1,000 per client per month (the 100 GB plan), no client churn, and clients joining evenly through each year.

5-YEAR FINANCIAL PROJECTION

UAE only · 45.9% EBITDA margin · Break-even Year 2.7 · 85% ROI

Expense Category	Amount (AED)
Salaries Management	14,000,000
Developers (10 members)	6,000,000
Testers (3 members)	1,800,000
Infrastructure	1,000,000
Marketing (6 members)	1,800,000
Other Expenses	5,000,000
TOTAL EXPENSES (5 Years)	29,600,000 AED

Metric	Value
Total Revenue (5yr)	AED 54,750,000
Total Expenses (5yr)	AED 29,600,000
EBITDA / Operating Profit	AED 25,150,000 (45.9%)
Average EBITDA per Year	AED 5,030,000
ROI	≈ 85.0%
Break-Even Point	Monthly ≈ Year 1.4 · Cumulative ≈ Year 2.7

One new client a day turns into about AED 25M of operating profit in five years.

AED 54.75M of UAE revenue against AED 29.6M of costs: every dirham spent returns about AED 1.85 (85% ROI). Monthly revenue covers monthly costs by Year 1.4, and cumulative revenue has repaid cumulative costs by Year 2.7.

Assumes UAE only, 365 new clients a year, AED 1,000 per client per month (the 100 GB plan), no client churn, clients joining evenly through each year, and costs flat at the plan shown. Monthly break-even is when one month of revenue covers one month of costs; cumulative break-even is when total revenue has repaid total costs.

FOUNDING TEAM: 100+ Years of ERP Expertise

This is an ERP team that discovered AI, not an AI team that discovered ERP.

OUR UAE PRESENCE

30+ years inside the UAE ERP market.

Dr. Lalit Khatri has worked in the ERP field in the UAE for 30+ years, from client onboarding to system integration. He also holds a doctorate in marketing.

OUR FIRST UAE MARKETS

Five founders who know real estate and logistics.

We start in the UAE with real estate and logistics. All five founders have strong exposure to both markets, backed by deep manufacturing experience.

Mr. V. Padbanaban

Co-Founder & CEO

30+ years designing and implementing ERP solutions for manufacturing industries across South India. Doctorate-level ERP architecture expertise.

Dr. Lalit Khatri

Co-Founder & GCC Market Lead

30+ years in the ERP field in the UAE. Doctorate in marketing. Deep expertise in end-to-end ERP life cycles, client onboarding and system integration. Strong manufacturing exposure.

Mr. Srinivasan Govindarajan

Co-Founder & Manufacturing Lead

30+ years manufacturing operations. Extensive knowledge of manufacturing workflows, production planning, inventory, and quality management.

Mr. Manohar

Co-Founder & Finance Lead

25+ years managing financial and business process systems. Designed the Accounting Agent and financial-production integration logic. Strong manufacturing exposure.

Mr. Bhuvaneswaran Shanmugam

Founder - Chief Architect

20+ years enterprise software. Designed Payanarss Type Script (patent-pending). Built Payanar from ground up. Published research on AI-native ERP architecture. Strong manufacturing exposure.

Development Team: 50+ engineers, testers & PMs in Bengaluru and Chennai, India | Planned UAE Team: AI, Partnerships, Sales — Abu Dhabi / Dubai

TRACTION & MILESTONES

What's next (6 months)

Q1 2025 — Inventory + Sales module complete

Q2 2025 — Browser tool v1 release

Q2 2025 — Customer acquisition — 5 pilot customers

Q2-Q3 2025 — Close $500K seed funding round

FUNDING & USE OF FUNDS

Seed Round: AED 2.4M – 2.6M to launch Payanar in the UAE

OUR FUNDING APPROACH

We raise on proof, not on a promise.

We haven't approached investors yet, by design. We are validating Payanar with customers first, and once in5 approves us we will approach investors with that validation behind us. Our target is AED 2.4 to 2.6 million, and we know exactly where every dirham goes.

50% Product & AI Development

AED 1.19–1.29M

- 2 Senior AI/Vector DB engineers
- 1 Frontend engineer
- Finance & Procurement modules
- Browser tool v1

20% Infrastructure & Cloud

AED 0.48–0.51M

- AWS cloud hosting setup
- Vector DB (Pinecone) production
- Security & compliance infrastructure
- CI/CD and DevOps tooling

15% UAE Setup & Operations

AED 0.36–0.39M

- Hub71 office (1 year)
- Legal & compliance
- Administrative overhead
- UAE entity establishment

10% Business Development

AED 0.24–0.26M

- Sales team (1–2 people)
- Customer success manager
- Pilot customer acquisition
- Partnership development

5% Marketing

AED 0.12–0.13M

- Content marketing
- LinkedIn and Product Hunt
- Webinars & training
- Brand identity & materials

THE ASK

AED 2.4–2.6M

Projected: 1,825 paying clients, AED 54.75M of UAE revenue and an 85% five-year ROI.

Runway: 18–24 months | Monthly break-even: Year 1.4 | 5-year ROI: 85%

ASK

Four things from in5 will take Payanar from prototype to paying UAE customers.

1 Workspace & Incubation

- Co-working space at in5, Dubai Internet City
- A Dubai base for customer meetings and demos

2 Expert Mentorship

- Mentors in enterprise software, SaaS pricing and UAE SMB sales
- Feedback on our free-software, pay-for-storage model

3 Customer Access

- Introductions to UAE SMBs for pilots through the in5 community
- Goal: 20 paying UAE SMBs in 90 days

4 Investor Network

- Introductions to seed investors for our AED 2.4–2.6M round
- Pitch feedback before investor meetings

Our 90-day goal with in5: 20 paying UAE SMBs on Payanar.

Software is not a privilege. Help us make it available to every business.

Thank You!

Let's build the next generation of modular, vendor-neutral ERP systems together.

Name: Bhuvaneswaran Shanmugam

Company: Payanar Net Works

Position: Founder & Solution Architect

Email: bhuvaness@gmail.com

LinkedIn: linkedin.com/in/bhuvaneswaran-shanmugam-b0672217

White Paper: SSRN: papers.ssrn.com/sol3/papers.cfm?abstract_id=5432994

Our Philosophy (20 sec)

“Software is a fundamental need for every business. It is not a privilege.”

“Digital empowerment is no longer a privilege—it is a fundamental need for every citizen. CRUD is the new pen and paper.”

"ERP should be as flexible as the business it serves. But why must a business change how it works just to fit the software it bought“

1. Problem Statement (70 sec)

Today, we buy an ERP, and then the ERP tells us how to behave.

Need a small change? Wait for the next release, or pay for deep customisation.

Want to leave? Re-map every record from one rigid data model to another. That is not a product. That is lock-in.

The Gartner reports says 80 percent of implementations fail. The average project takes 18 months and 2.5 million dollars

So fifty million SMBs worldwide simply have no ERP. Seventy percent say too expensive. Sixty-five percent say too complex.

2. Solution and Competitors: PTS (100 sec)

Our answer is simple. Stop hiding the business logics inside code. Write it down as knowledge base.
We created Payanar Type Script, or PTS. One language that describes the business data, business rules and the UI screens, in a form AI can read. It is stored as a knowledge base and run by our own interpreter.
So changing your business means changing a description, not rebuilding the system.

Now look at the leaders: Microsoft, SAP, Oracle, Zoho. Four leaders, four vendor-specific languages: X++, ABAP, SuiteScript, Deluge. Your business logic lives inside their tools.

PTS is different. It is open to read, use and extend. No single vendor should own your business logic.

We believe PTS is a strong candidate to become a common language for business software, one that any vendor, developer or AI can understand.

And we break the ERP into small independent agents. Need something new? Add an agent between two existing ones, with no downtime.

The incumbents are built for the enterprise. We are built for everyone else. Every use case on mobile, with pricing that starts near zero.”

3. Target Customer

Our customer is the UAE real estate business.

Developers, property managers, agencies and owners. They manage units, tenants, leases, payments and maintenance across many properties, and many of them do it on WhatsApp, Excel and paper.

We start with three segments:
Tenancy management: leases, rent collection, renewals.

Facility management: maintenance requests, vendors, service contracts.

Hotels and hospitality: bookings, housekeeping, billing.

Each segment has different rules. Traditional ERP forces them into one template. PTS lets each one describe its own.

Micro businesses with one to nine people, and SMBs with up to 250. They don’t lack ambition. They lack access.”

4. Market Size

The opportunity is large and under-served. A 21 to 85 billion dollar global addressable market.

In MENA, ERP penetration is below 5 percent, in a market growing 18 to 22 percent a year.

We start in the UAE, where SMEs are 94 percent of all companies.

Our five-year plan needs only about one percent of Tier-2 and Tier-3 SMEs.

5. Go-to-Market and Marketing Strategy (55 sec)

Our model removes the barrier. The application is free. No licence, no per-user fee, no per-module fee.

You pay only for storage: AED 500 a month for 50 gigabytes, AED 1,000 for 100.

Our strategy has three steps.
One: free download, so there is nothing to approve.

Two: proof before payment. We run your own workflow first, one department at a time.

Three: you grow, you add modules, you store more, and only then do we earn more.

We reach customers through pilots, the in5 community, and content, LinkedIn and webinars.
We don’t charge for software. We grow when our customers grow.

6. Revenue Projection (55 sec)

Here is what that means. One new client a day.

At AED 1,000 a month, that is 1,825 paying clients by year five. AED 19.7 million in annual revenue. AED 54.75 million cumulative.

Against AED 29.6 million in costs, that leaves about AED 25 million in operating profit, with monthly break-even around year 1.4.

These are projections, and the assumptions are on the slide: UAE only, steady growth, no churn. That is why our first goal is simple: 20 paying SMBs in 90 days.

7. Founding Team and UAE Exposure (50 sec)

Why us? Five founders, over 30+ years of ERP experience.

We are an ERP team that discovered AI, not an AI team that discovered ERP.

Dr. Lalit Khatri, Mr Sreenivasan, Mr. Padmanaban, Mr. Bhuvaneswaran has worked in the UAE ERP market for over thirty years, from client onboarding to system integration. Our founders also bring deep manufacturing, finance and architecture experience.

I designed PTS and published the research on SSRN.

Behind us are 50-plus engineers in Bengaluru and Chennai, and our UAE team for AI, partnerships and sales is planned for Abu Dhabi and Dubai.

8. Closing Note

In today's world, just as reading and writing are essential skills, so too is the ability to engage with digital tools. Every citizen should have the power to create, manage, and use digital applications without technical barriers or dependency on costly developers.

Digital empowerment is a right, not a privilege.
Payanar Type Script is not another ERP to fit your business into. It is a way to write the business down, so software can follow.

Businesses should not adapt to software. Software should adapt to businesses. Thank you.
