Viki ERP

Modular AI Agent ERP

Reimagining Enterprise Systems with Prompt-Driven AI Agents

Breaking vendor lock-in and enabling infinite composability.

Powered by PayanarssType Script (PTS) — An AI-Understandable Language and Knowledge Base

Abu Dhabi, UAE

THE PROBLEM
Current ERP Systems Are Failing

Data Migration Between ERPs

Moving from one ERP to another means re-mapping data from one rigid data model to another — the main reason switching is so costly and risky.

Vendor Lock-In

Organizations rely on one vendor — costly to switch or integrate alternatives.

Hard to Customize

Even minor changes require deep core modifications or waiting for next release.

Integration Challenges

Monolithic ERPs were not built for openness — third-party integration is fragile.

Monolithic Architecture

Giant tightly-coupled modules that are interdependent and fragile.

High Cost of Change

Making updates to a deployed ERP is expensive, slow, and risky.

Supporting Evidence

50M SMBs globally have NO ERP

70% cite "Too expensive"

65% cite "Too complex"

80% implementation failures (Gartner)

Average ERP project: 18 months, $2.5M

Only 15% SMBs use enterprise software

$500B+ market underserved

"ERP should be as flexible as the business it serves — today it isn't."

OUR SOLUTION: PTS-Driven, Modular AI Agent ERP

One AI-understandable language — PTS — defines data models, business logic and UI behaviour

Granular, Layered Agents

Functionality is split at a very fine grain (e.g. "Employee Record," "Onboarding," "Training"), each with UI, Business and Data layers and its own data store. No giant unified schema.

PTS: AI-Understandable Language

A scripting language AI can understand. All data models and business logic are defined in PTS, so the ERP is described in a form AI can read, not hand-coded per customer.

PTS Interpreter

We built the interpreter for PTS. It runs PTS directly, so adding or changing a data model or business rule is a PTS change, not a rebuild of the core.

PTS as AI Knowledge Base

PTS is stored in a Vector DB / Graph DB as the knowledge base AI works from, so the right definitions can be found by meaning and by how types, lookups and rules relate.

Configuration-Driven UI & Logic

PTS is selected from business configuration and lookup types. UI rendering and business logic both work from the output of the Vector / Graph DB.

Security & Governance

Each agent enforces authentication, authorisation, and data privacy. Only authorised orchestrators can invoke sensitive agents.

OUR SOLUTION: Architecture — Communication & Orchestration

Prompt-based inter-agent communication, dynamic workflows, open APIs

Prompt-Based Communication

Agents communicate via high-level natural language prompts. An AI layer interprets and routes messages — eliminating proprietary API dependencies.

Well-Defined Open APIs

Every agent exposes RESTful APIs documented with OpenAPI/Swagger. Integration is transparent, standardised, and not proprietary.

Dynamic Workflow Orchestration

Business rules are authored in PTS, not embedded procedural code. The AI layer retrieves the right PTS from the Vector / Graph DB and orchestrates it at run time.

Comprehensive Logging

Robust logging and monitoring from the start. Distributed agent system issues can be pinpointed despite many services being involved.

Extensibility via Agent Marketplace

No vendor lock-in — organisations can source agents from multiple vendors or open-source communities and integrate seamlessly.

Cross-Company B2B Integration

Processes span across suppliers, customers, and regulators. Company A's ERP issues a PO that Company B's ERP receives as a sales order via agent prompts.

OUR SOLUTION: Every Use Case, on Every Device

All business use cases for end users — mobile for everyone, laptop / desktop for companies

Full Use-Case Coverage

Viki ERP covers all business use cases for end users, from micro businesses to companies — not a cut-down companion app.

Complete Mobile App

Every business use case is available in the mobile app, so nothing a user needs is limited to desktop.

Companies: Laptop & Desktop

Companies access Viki ERP from the laptops and desktops they already use.

Independent Users: Own Mobile

Independent users access Viki ERP on their own mobile phones — no company hardware or desktop needed.

Talk to the ERP, Anywhere

Viki lets users talk to the ERP on mobile — record a sale or send an invoice without navigating menus.

UI Driven by PTS

UI rendering works from PTS selected by business configuration and lookup types, so each business gets the screens it needs.

WHY IT MATTERS

Shifting from a proprietary Black Box to a Composable, Vendor-Agnostic, User-Centric Service Platform.

Current Problem	Our Solution: Agent-Based ERP
Vendor Lock-In (high costs, single source)	No Vendor Lock-In ✅ — Any vendor can build/service/extend using independent Agents in any language.
Slow, Disruptive Upgrades (downtime)	Rapid Innovation ⚡ — Add new agent between two existing functions without downtime.
Rigid, Closed Architecture	Composable Ecosystem 🏪 — Agent Store (like NPM/NuGet) for ERP components.
Complex User Interfaces (transaction codes)	Human-Like Interaction 🗣️ — Users talk to the ERP; no need to navigate cumbersome menus.
Isolated Business Systems	Cross-Company Integration 🌐 — Secure Prompt-to-Prompt communication across organisations.

WHY NOW

Three enabling technologies are maturing at the exact moment the current ERP model is failing.

Generative AI & Autonomous Agents

Enables:

Powers Human-Like ERP Interaction and Rapid Innovation via Agents.

Why Now:

Rise of LLMs and Agent Frameworks allows business logic to be invoked via simple natural language prompts — replacing complex menu navigation and hardcoded APIs.

Composable / Microservices Architecture

Enables:

Enables No Vendor Lock-In and the Composable Ecosystem.

Why Now:

Cloud-Native, API-first, and Microservices design allows ERP to be broken into small, independently deployable Agents that can be built by any vendor and updated without downtime.

Secure, Prompt-Driven Interoperability

Enables:

Facilitates Cross-Company Integration.

Why Now:

Standardised Prompt-to-Prompt communication between autonomous agents makes real-time B2B integration seamless — eliminating expensive, brittle point-to-point connections.

MARKET & BUSINESS MODEL

Focus: Tier-2 & Tier-3 SMBs in UAE & India

These businesses often lack enterprise-grade ERP, are more price-sensitive, and represent a high-growth segment with untapped potential compared to saturated Tier-1 markets.

AE UAE

~557,000 SMEs across all emirates (2022)
SMEs = 94.4% of all UAE companies
Contribute 63.5% to non-oil GDP
~170,000–220,000 Tier-2/3 SMEs addressable
30–50% penetration = 51K–110K clients
Strong govt AI & digital economy initiatives

IN India

608,935 small + 55,488 medium formal enterprises
Millions more informally in Tier-2/3 cities
>40% of new economic activity from non-metros
30–50% of SMBs in addressable Tier-2/3 cities
2–5 million SMBs addressable over time
60M+ MSMEs — 30% of GDP, 110M employed

Conservative target: 5% UAE Tier-2/3 (≈8,500 clients) + 1–2% India Tier-2/3 (≈20,000–60,000 clients) → USD 12–50M ARR within 5 years

Go To Market: SMB & Micro Businesses

Viki ERP is designed ground-up for businesses that traditional ERP has always ignored

Micro Business

1–9 employees

Who they are

Solo traders, home-based businesses, individual shop owners, freelancers, food stalls, single-outlet gyms.

Their ERP problem

No ERP exists for them. They use WhatsApp for orders, Excel for accounts, and paper for inventory.

Viki ERP solution

Viki on mobile. Talk to the ERP. Record a sale in 10 seconds. Send an invoice in one tap.

Monthly cost

AED 0.10–5/month

Market size

UAE: 300K+
India: 30M+

Small Business

10–49 employees

Who they are

Multi-staff gyms, restaurant chains (2–5 outlets), retail shops, HR firms, trading companies.

Their ERP problem

Too big for spreadsheets, too small for SAP. Existing cloud ERPs are complex and per-user pricing punishes growth.

Viki ERP solution

Full ERP suite. Role-based mobile access. Staff manage operations; owner gets daily summary from Viki.

Monthly cost

AED 50–500/month

Market size

UAE: 180K+
India: 5M+

Medium Business

50–250 employees

Who they are

Multi-branch gym chains, hotel groups, established retailers, manufacturing SMBs, construction firms.

Their ERP problem

Using legacy ERPs with expensive consultants. Every customisation costs AED 50K+. Change takes 6 months.

Viki ERP solution

Modular agent architecture. Every module independent. Customise without consultants. Add a new branch in 30 minutes.

Monthly cost

AED 500–5,000/month

Market size

UAE: 77K+
India: 600K+

Combined addressable market: 35M+ businesses in UAE and India · Only 5–15% currently have any ERP · Viki ERP is built for the other 95%

MARKET SIZE: $21B+ TAM

Global SMB ERP market — massively underserved

50M	$21-85B	18-22%	<5%
SMBs globally have no ERP	Total Addressable Market	MENA market CAGR	Current MENA ERP penetration

Why Now? Three forces converging:

Legacy ERP Model Collapsing

80% implementation failure rate. Businesses desperate for alternatives.

Enabling Technology Mature

Vector DBs, LLMs, semantic search — all ready for production.

UAE/GCC at Digital Inflection Point

Vision 2031, National AI Strategy, 15%+ annual SMB growth.

REVENUE METRICS — 5 YEAR PROJECTION

USD revenue across UAE and India markets

Year / Market	No. of Clients	Per Client Revenue (USD)	Total Revenue (USD)
UAE (Year 1)	100	$100,000	$10,000,000
IND (Year 1)	100	$8,333	$833,333
Total (Year 1)	200	—	$10,833,333
UAE (5-Year)	500	$100,000	$50,000,000
IND (5-Year)	500	$8,333	$4,166,666
Total (5-Year)	1,000	—	$54,166,666

54,166
Avg Revenue/Client (Year 1)

39.1%
5-Year CAGR

92.3%
UAE Revenue Mix

7.7%
India Revenue Mix

5-YEAR FINANCIAL PROJECTION

46.3% EBITDA margin · Break-even Year 2.5 · 86.78% ROI

Expense Category	Amount (AED)
Salaries Management	14,000,000
Developers (10 members)	6,000,000
Testers (3 members)	1,800,000
Infrastructure	1,000,000
Marketing (6 members)	1,800,000
Other Expenses	5,000,000
TOTAL EXPENSES (5 Years)	29,000,000 AED

Metric	Value
Total Revenue (5yr)	AED 54,166,667

EBITDA / Operating Profit	AED 25,166,667 (46.3%)
Average EBITDA per Year	AED 5,033,333
ROI	≈ 86.78%
Break-Even Point	≈ Year 2.5

WHY UAE AND INDIA — STRATEGIC MARKET FOCUS

Domain expertise, ecosystem maturity, lower competition, and massive SME potential

AE UAE — Gateway to GCC

- Founder based in UAE — strategic GCC expansion base
- 557,000+ SMEs; 94% of all companies; 63.5% non-oil GDP
- UAE National AI Strategy 2031 & Digital Economy Strategy align perfectly
- Tier-2/3 emirates (Sharjah, Ajman, RAK, Fujairah) need affordable ERP tools
- UAE provides innovation ecosystem, funding network, and early-adopter SMB market

IN India — Deep ERP Expertise

- Founding team has decades of ERP domain experience across Indian industries
- 60M+ MSMEs — 30% of GDP, employing 110 million people
- Significant share in Tier-2/3 cities where ERP adoption remains very low
- Viki ERP modular AI model directly addresses high cost and vendor dependency pain
- India provides the engineering foundation and large addressable market for scaling

Viki ERP ARCHITECTURE — THE TECHNOLOGY STACK

Polyglot Microservices — Best technology for each core function

Layer	Technology	Primary Role	Core Value
Frontend	React	User Experience & Interaction	Rapid, dynamic UX. Industry-standard for complex, scalable web applications.
Backend / APIs	C# / .NET	Enterprise Backbone & Orchestration	Stability, Performance, Security. The robust engine of the ERP.

React: UX Layer

Cross-platform delivery (web & mobile via React Native). Completely decoupled from C# API — faster feature releases without impacting core logic. Excels at consuming and visualising Python AI agent outputs.

C# / .NET: Enterprise Backbone

High-performance ASP.NET Core APIs — low-latency, high-throughput. Statically-typed language catches critical errors at compile time, guaranteeing data integrity.

Python: Intelligence Layer

Unrivalled AI ecosystem: LangChain, AutoGen agent frameworks, PyTorch, TensorFlow. Powers forecasting, NLP, and complex calculations. FastAPI for lightweight microservice hosting.

FOUNDING TEAM: 100+ Years of ERP Expertise

This is an ERP team that discovered AI, not an AI team that discovered ERP.

Mr. V. Padbanaban

Co-Founder & CEO

30+ years designing and implementing ERP solutions for manufacturing industries across South India. Doctorate-level ERP architecture expertise.

Dr. Lalit Khatri

Co-Founder & GCC Market Lead

20+ years ERP deployment in UAE and GCC. Deep expertise in end-to-end ERP life cycles, client onboarding, and system integration.

Mr. Srinivasan Govindarajan

Co-Founder & Manufacturing Lead

30+ years manufacturing operations. Extensive knowledge of manufacturing workflows, production planning, inventory, and quality management.

Mr. Manohar

Co-Founder & Finance Lead

25+ years managing financial and business process systems. Designed the Accounting Agent and financial-production integration logic.

Mr. Bhuvaneswaran Shanmugam

Founder Chief Architect

20+ years enterprise software. Designed PayanarssType Script (patent-pending). Built Viki ERP from ground up. Published research on AI-native ERP architecture.

Development Team: 50+ engineers, testers & PMs in Bengaluru and Chennai, India | Planned UAE Team: AI, Partnerships, Sales — Abu Dhabi / Dubai

TRACTION & MILESTONES

Proof of concept, research published, incubator applications in progress

UAE Incubator Submissions	✓✓ In5, Hub71, MBRIF
Pilot Partner Discussions	🚀 In Progress

What's next (6 months)

Q1 2025	Inventory + Sales module complete
Q2 2025	Browser tool v1 release
Q2 2025	Customer acquisition — 5 pilot customers
Q2-Q3 2025	Close $500K seed funding round

FUNDING & USE OF FUNDS

Seed Round: $650,000 – $700,000 (AED 26M – 28M)

50% Product & AI Development

$325–350K

2 Senior AI/Vector DB engineers
1 Frontend engineer
Finance & Procurement modules
Browser tool v1

20% Infrastructure & Cloud

$130–140K

AWS cloud hosting setup
Vector DB (Pinecone) production
Security & compliance infrastructure
CI/CD and DevOps tooling

15% UAE Setup & Operations

$97–105K

Hub71 office (1 year)
Legal & compliance
Administrative overhead
UAE entity establishment

10% Business Development

$65–70K

Sales team (1–2 people)
Customer success manager
Pilot customer acquisition
Partnership development

5% Marketing

$32–35K

Content marketing
LinkedIn and Product Hunt
Webinars & training
Brand identity & materials

Runway: 18–24 months | EBITDA Positive: Month 30–36 | Return: 10x (5yr) to 100x (10yr)

VISION & ASK

To make ERP systems modular, intelligent, and vendor-neutral for enterprises worldwide.

Year 1 — Establish

Validate product-market fit
Achieve $6M ARR
5,000+ agents deployed
MENA market leader

Year 3 — Dominate Region

$100M ARR
50,000 agents
Expand to Asia, Africa
Become "Stripe for ERP"

Year 5 — Global Impact

$1B+ ARR
500,000 agents
1M+ PTS nodes — 100+ sectors
IPO-ready

The Ask

What we're asking in5 for
We are building Viki ERP, an AI-native ERP for UAE SMBs, on a language (PTS) that defines business logic as readable, executable knowledge.
Support requested: licence and visas for two (founder and first hire), a Dubai Internet City desk, and mentors in UAE SMB sales and fundraising.
Introductions requested: ten SMBs in one sector for discovery calls, with the aim of signing three paid pilots within 90 days.
What you get: a working product, a first sector fully configured, and measurable pilot results at the end of the programme.
Next step: a seed round of USD 650K–700K (AED 2.4M–2.6M) for 18 months of runway, raised once pilots prove demand.

"Let's redefine ERP — one agent at a time."

Thank You!

Let's build the next generation of modular, vendor-neutral ERP systems together.
